Profile summary

Electronics and Communication Engineering undergraduate with hands-on experience in industrial automation, programming, and hardware integration. Proficient in Python, Java, SQL, and microcontrollers, with a proven track record of developing embedded hardware systems. Former vocational trainee at Tata Steel with a strong foundation in robotics and automation.

Education

Siksha 'O' Anusandhan, Odisha
Electronics and Communication, B.Tech
CGPA: 9.1
2025 - 2029

Vidya Bharati Chinmaya Vidyalaya, East Singhbhum
Science Senior Secondary (XII), CBSE
Percentage: 82.00%
2025

Vidya Bharati Chinmaya Vidyalaya, East Singhbhum
Secondary (X), CBSE
Percentage: 89.00%
2023

Experience

Tata Steel | Vocational Trainee
Jamshedpur, India | 2026-06-01 - 2026-08-03
Collaborated with a technical team to study and operate Programmable Logic Controllers (PLCs) for industrial automation. Analyzed the operational mechanics and performance metrics of induction motors. Learned the foundational dynamics of large-scale industrial power systems and electrical distribution.

Skills

Programming Languages: Java, Python,
Libraries/Frameworks: Streamlet
Tools / Platforms: AutoCAD, Raspberry Pi, ESP32, Tina
Databases: MySQL

Projects / Open-Source

Alumni Nexus | [Link](#)
Python, Streamlet, MySQL
It is a professional networking platform built using Python and Streamlet with a MySQL backend. Features a searchable alumni directory, mentorship toggle, referral board for job and internship postings, and automated onboarding and profile management.

Line Follower Car
Arduino Nano, Circuit Design, array sensor
An autonomous line-following robot engineered around an Arduino Nano, which serves as the central controller for real-time logic and motor operation. It leverages an 8-channel IR sensor array to achieve high-resolution track detection, enabling smooth, precise, and highly responsive navigation.

EmployeeLink | [Link](#)
Python, Streamlet, PostgreSQL
It is web-based workforce management system for factories with multiple departments. Department heads log in and manage employees only within their own department organized down to the exact Sub-Department, Section, and Workstation while still being able to search across the whole company. Employees can also submit their own details through a shared link or QR code without an account, but nothing becomes official until their department head reviews and approves it; the system also tracks each employee's skills and, where relevant, the vendor who supplied them.

Automatic Irrigation System

Op-amp and soil moisture sensor

The soil moisture sensor measures water content by detecting electrical resistance in the earth, generating a corresponding analog voltage based on dampness. An operational amplifier acts as a comparator, evaluating this analog signal against a calibrated threshold to trigger a precise digital on/of output for automated irrigation.

ANTI THEFT ALARM

CMOS sequential logic, CD 4027 dual JK Flip-Flop IC

This anti-theft circuit uses a door-triggered switch connected to a 4027 JK Flip-Flop, serving as a memory latch to capture and hold the initial intrusion signal. The latched output drives a BC547 transistor to activate a relay and LED indicator, ensuring the alarm remains continuously engaged until it is manually cleared via the reset push button.

Certifications

- TATA PRASHIKSHAN - [Tata Steel](#)

EXTRA CURRICULAR ACTIVITIES

- Core member at ITER Robotics
- Core member at GFG ITER
